

# Energy efficiency in buildings

 ECTS  
2 crédits

 Composante  
Polytech  
Annecy-  
Chambéry

## En bref

- **Langues d'enseignement:** Anglais
- **Méthodes d'enseignement:** En présence
- **Forme d'enseignement :** Cours magistral
- **Ouvert aux étudiants en échange:** Oui

## Présentation

### Description

- \* Semester 9
- \* Duration : Within one semester
- \* Type: Mandatory
- \* Student workload: Lecture (CM): 18 hours + hours of self-study
- \* Applicability: SOLEM course only
- \* Teaching and learning method : seminar, practice, project
- \* Module examination: 1 written exam (50%), 1 individual oral presentation 1 written exam (50%)

**Responsible person for the module:** Dorothée Charlier

Senior lecturer and researcher, Université Savoie Mont Blanc, IAE, Laboratory IREG

### Objectifs

#### Major intended learning outcomes:

This course examines the economic dimensions of energy efficiency in buildings. It explores the financial, regulatory, and market-driven factors influencing energy-saving measures in residential and commercial constructions. Students will analyze cost-saving potentials, investment strategies, and the economic impact of energy efficiency standards and policies.

**By the end of this course, students will be able to:**

- \* Understand the economic principles underlying energy efficiency investments in buildings.
- \* Analyze financial mechanisms and incentives that promote energy efficiency.
- \* Evaluate the cost-effectiveness of energy-efficient technologies and retrofits.
- \* Assess the impact of regulatory policies on market behaviors and investment decisions.

**Correspondence between major intended learning outcomes and assessment:**

Students should have the ability to connect seminar and learnings in empirical studies in energy efficiency and in energy efficiency of building.

## Heures d'enseignement

Energy efficiency in buildings - CM	Cours Magistral	18h
-------------------------------------	-----------------	-----

## Pré-requis obligatoires

Basic knowledge in economics and cost-benefit analysis

## Plan du cours

**Content of the module:**

- \* Introduction 1,5 h Dorothée Charlier
- \* Overview of energy consumption in buildings
- \* Economic theories related to energy efficiency
- \* Presentation of the project 1,5h Dorothée Charlier + 12h empirical case studies in energy efficiency
- \* Seminar: energy efficiency and architecture- external presentation –3h
- \* Seminar: energy efficiency and fuel poverty – external presentation – 3h
- \* Seminar: energy efficiency – drivers and limit to energy efficiency renovation – external presentation – 3h
- \* Seminar: energy efficiency, adaptation and vulnerability – external presentation – 3h

**Group Project:**

Students will work in groups to analyze a real-world building or project, applying economic analysis tools to evaluate the feasibility and impact of various energy efficiency measures. The project culminates in a presentation and a written report.
